

Experiment 4

Aim: Exp 4: Using PHP and mysql perform the following operations

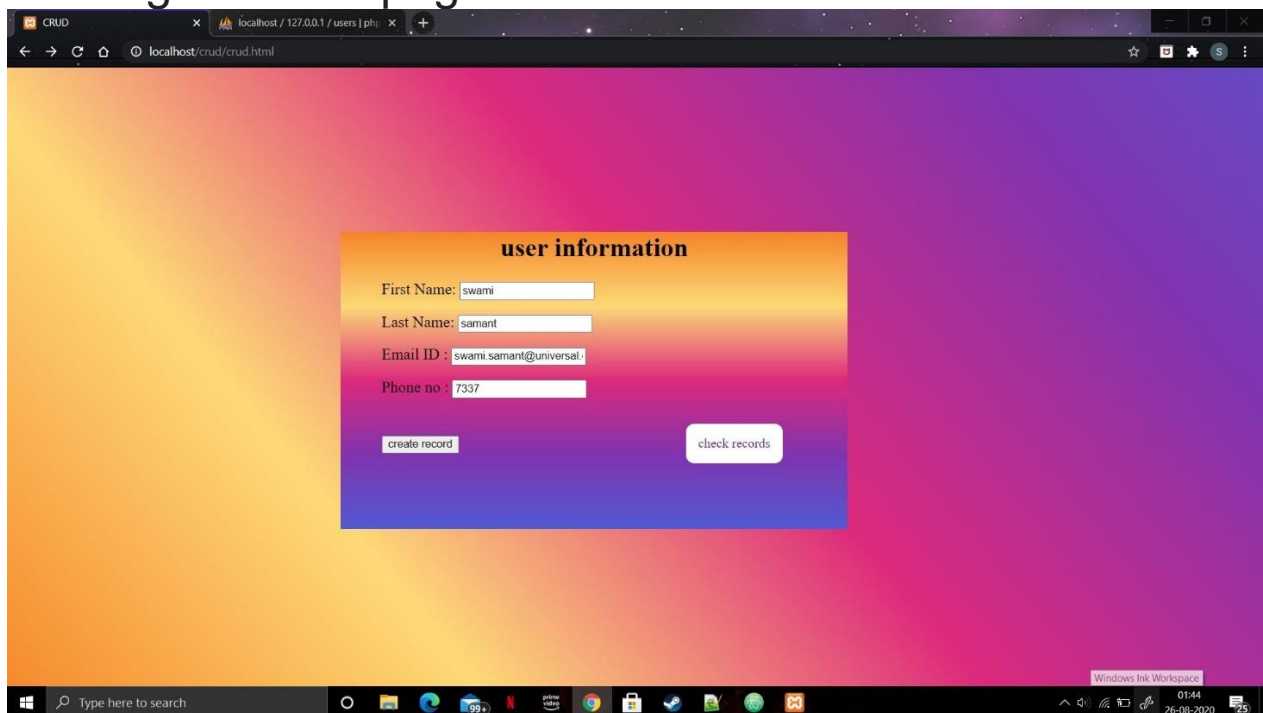

1. Create
2. Read
3. Update
4. Delete

Theory: The CREATE command is used to create the table into the database. The INSERT command is used to insert the values into the table. Select command is used to select row and shown into tabular form.

UPDATE command is used to update the data of the selected row and DELETE command is used to delete the row. The commands are given in SQL using php

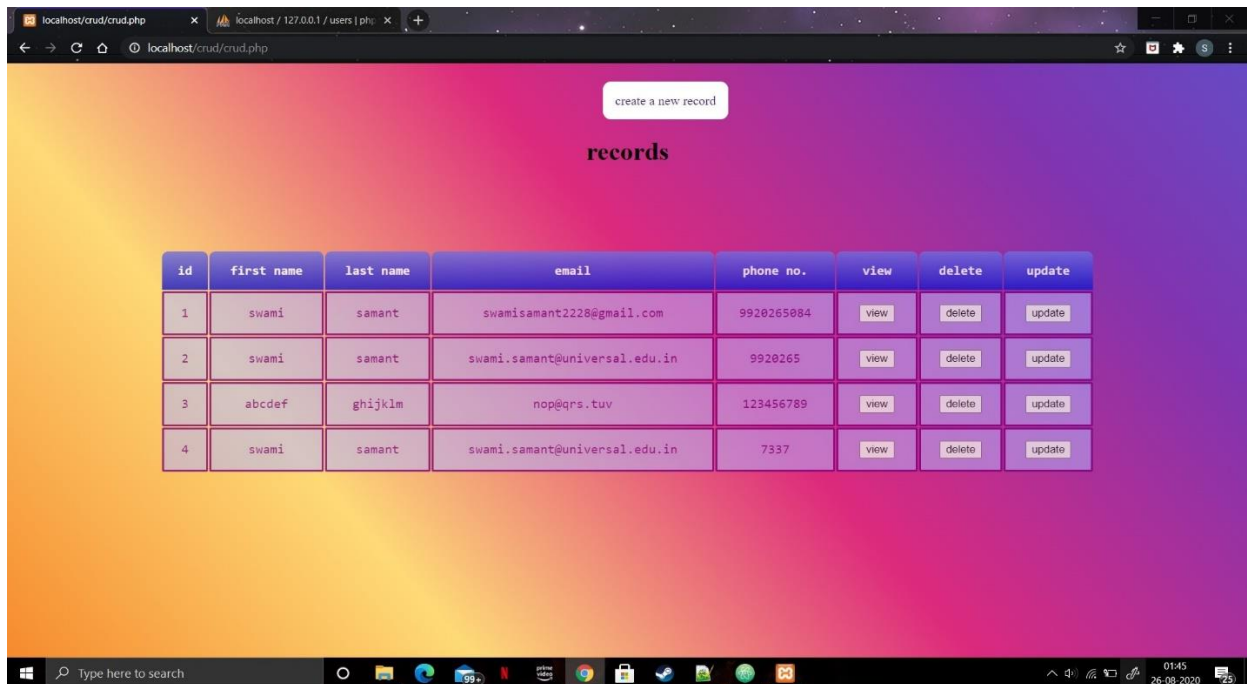

Output:

The registration page

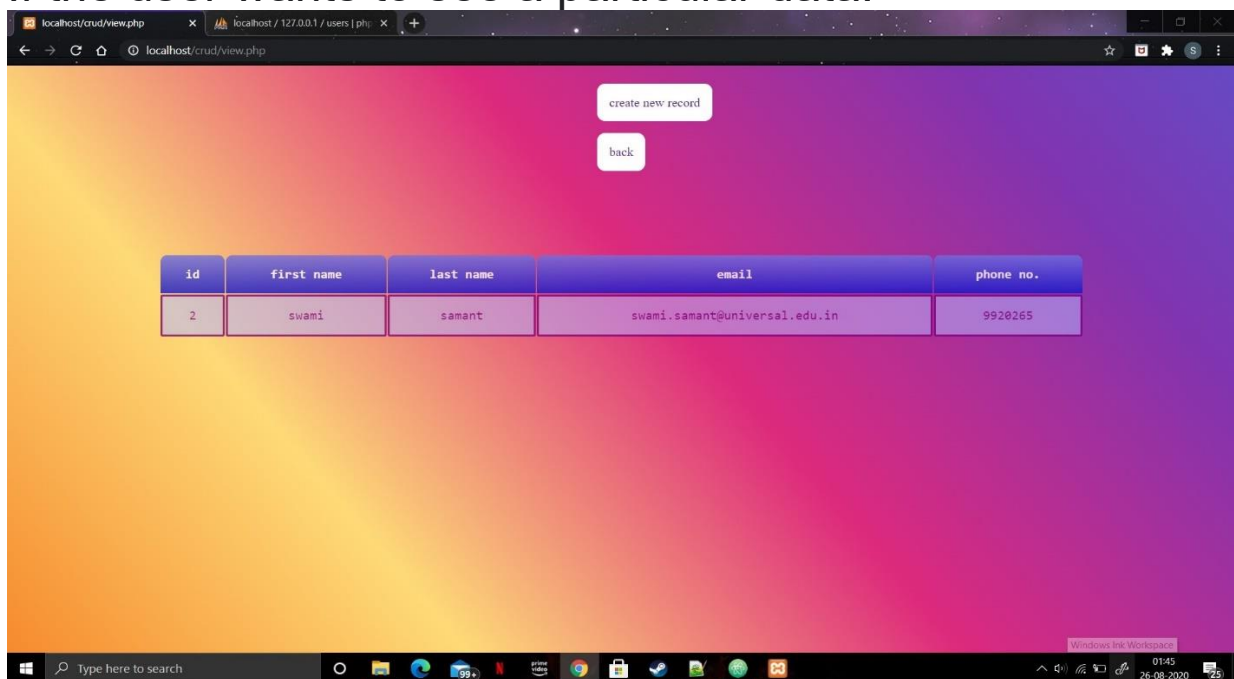

The screenshot shows a web browser window with the address bar displaying 'localhost/crud/crud.html'. The page has a vibrant orange-to-purple gradient background. In the center, there is a white rectangular box titled 'user information'. Inside this box, there are four input fields: 'First Name' with the value 'swami', 'Last Name' with 'samant', 'Email ID' with 'swami.samant@universal.', and 'Phone no' with '7337'. Below these fields are two buttons: 'create record' and 'check records'. The browser's taskbar at the bottom shows various application icons and the system clock indicating 01:44 on 26-08-2020.

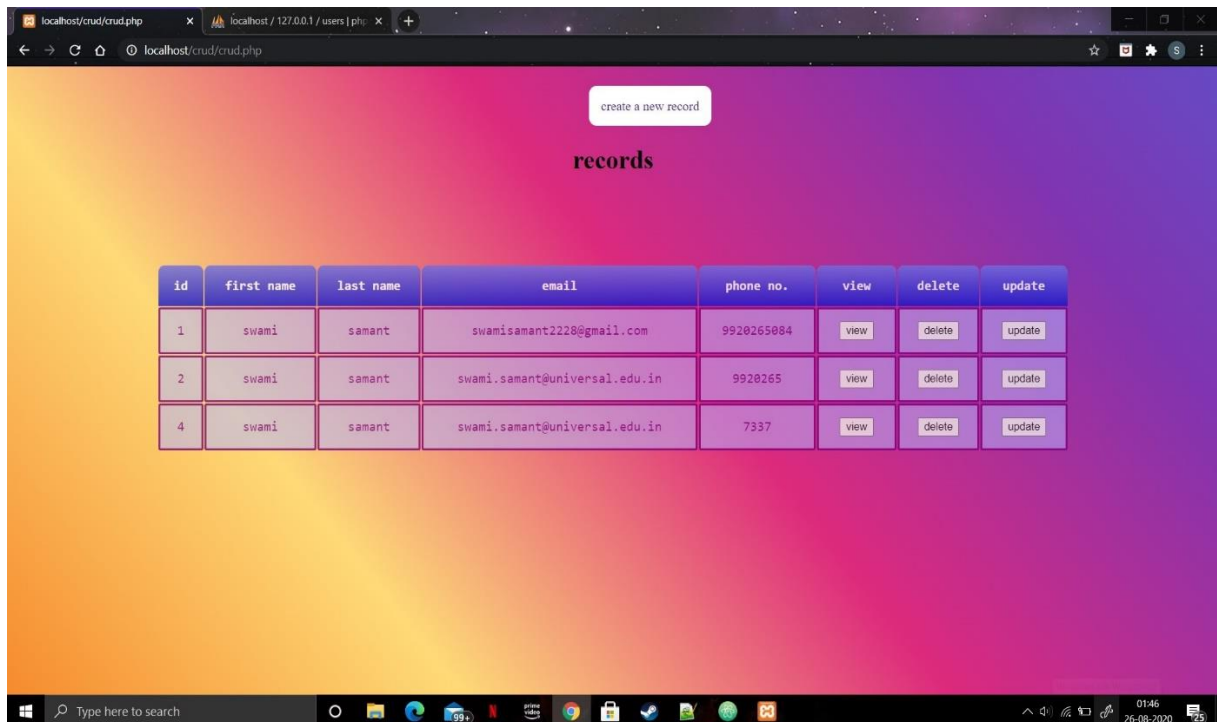

After creating record or using check record the record is shown in tabular form:

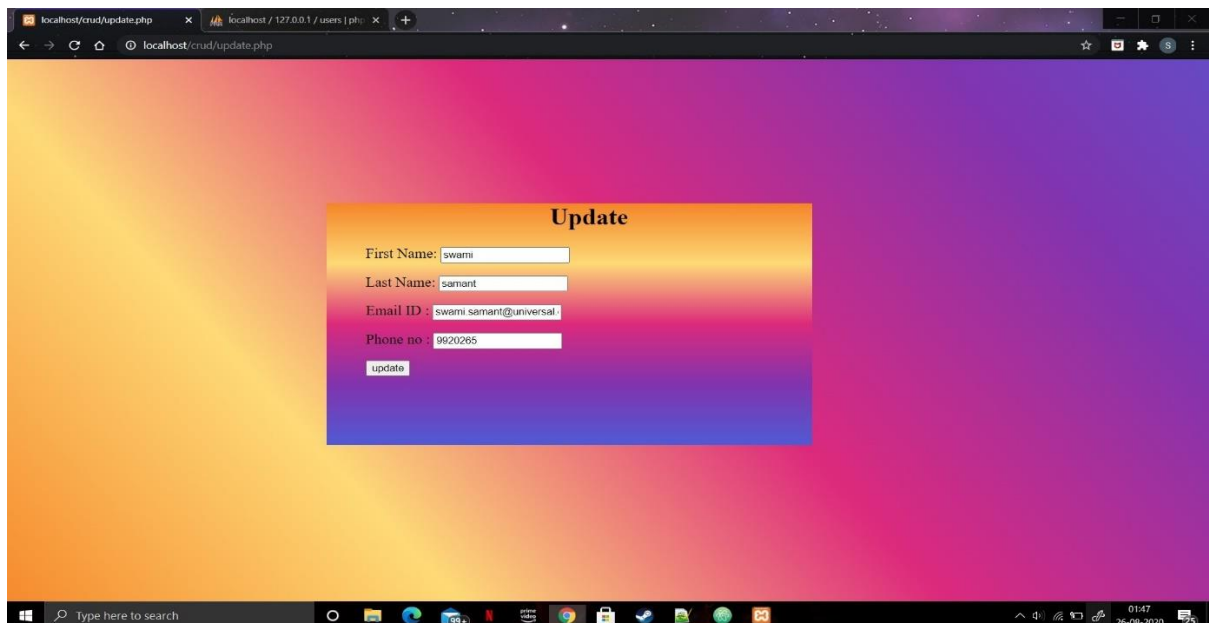

If the user wants to see a particular data:

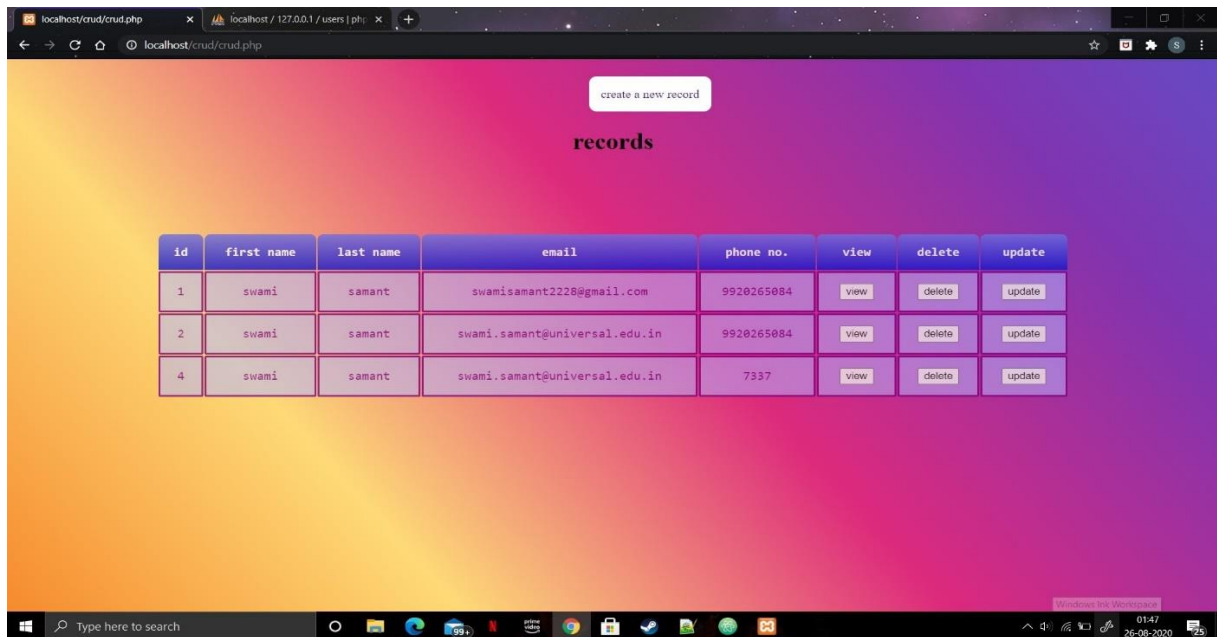

If the user wants to delete a particular data:

If the user decides to update given data. The previous details will be auto filled:

Updated records:

Conclusion: we learned to use the Create, read, update, delete sql commands using php.
